PLANT NUTRIENTS

Essential elements required for healthy plant growth and development.

MACRONUTRIENTS

Needed in larger amounts

Nitrogen (N)

Promotes leafy green growth and is essential for protein synthesis.

Phosphorus (P)

Supports root development, flowering, and energy transfer.

Potassium (K)

Improves overall plant health, disease resistance, and fruit quality.

Calcium (Ca)

Strengthens cell walls and supports cell division and growth.

MICRONUTRIENTS

Needed in smaller amounts

Iron (Fe)

Important for chlorophyll production and enzyme function.

Manganese (Mn)

Supports photosynthesis and helps in enzyme activation.

Zinc (Zn)

Aids in growth regulation and helps in hormone production.

Copper (Cu)

Supports enzyme activity and contributes to strong cell walls.

Boron (B)

Important for cell wall formation and pollen production.

TEEN-ANIM

ModuleFarming CommunitySimulation

Both macro and micronutrients work together to ensure optimal plant growth. Deficiency or excess of any nutrient can affect plant health and productivity.
